4x4 Magic Square. These harder 4x4 magic squares are step up from the 3x3 puzzles, but still fairly easy to solve if you have been practicing your addition worksheets. The normal squares with values 1-16 are easy to solve, but the non-normal squares may need your calculator!

Classroom Resources - National Council of Teachers of Mathematics

In recreational mathematics, a square array of numbers, usually positive integers, is called a magic square if the sums of the numbers in each row, each column, and both main diagonals are the same. The order of the magic square is the number of integers along one side (n), and the constant sum is called the magic constant.If the array includes just the positive integers, the magic ...

Magic square - Wikipedia

Magic squares are square grids, in this instance with a 3x3 pattern that are filled with numbers, in such a way that each row, each column, and the two diagonals add up to the same number.By giving some of the numbers in the square, usually, including one complete row, children should be able to work out the missing numbers.Magic squares are somewhat similar to Sudoku in that they revolve ...

Magic Sum = 3 * Middle Number. Then each opposite pair sums to twice the middle number, and the opposite pairs all consist of two numbers of the same parity, equidistant from the middle number. Every corner is half the sum of the two squares which are "knight's move" away (the middle squares of the opposite sides), and falls halfway between them.

Magic Square Solver - GottfriedVilje.net

The solution is not ordinarily obtained by computing the inverse of 7, that is $7^{-1} = 0.142857\dots$ and then multiplying 7^{-1} by 21. This would be more work and, if 7^{-1} is represented to a finite number of digits, less accurate. Similar considerations apply to sets of linear equations with more than one unknown; MATLAB ® solves such equations without computing the inverse of the matrix.

Solve each quadrant using the methodology for odd-numbered magic squares. Quadrant A will be simple to fill out, as it starts with the number 1, as magic squares usually do. Quadrants B-D, however, will start with strange numbers — 10, 19, and 28, respectively, in our example. Treat the first number of each quadrant as though it is the number ...
