For other formatting issues, we've covered everything you need to convert ebooks.

Primary Succession Answer Key

Explanation: Secondary succession usually occurs faster than primary succession because the substrate is already present. In primary succession, there is no soil and it needs to form. This process takes time, as pioneer species must colonize the area, they must die, and as this happens over and over again, soil forms.

What are the 6 stages of primary succession? - AskingLot.com

ecological succession, the process by which the structure of a biological community evolves over time. Two different types of succession—primary and secondary—have been distinguished. Primary succession occurs in essentially lifeless areas—regions in which the soil is incapable of sustaining life as a result of such factors as lava flows, newly formed sand dunes, or rocks left from a ...

ecological succession | Definition & Facts | Britannica

Secondary succession is defined as the development of natural communities on land in the presence of soil but the absence of natural vegetation due to some natural calamities or human-induced activities. One best example of secondary succession is abandoned cropland. Below we have discussed the difference between Primary and Secondary Succession.
