Creating a ZFS storage pool (zpool) requires permanent decisions, as the pool structure cannot change after creation. The most important decision is which types of vdevs to group the physical disks into. See the list of vdev types for details about the possible options. After creating the pool, most vdev types do not allow adding disks to the vdev.

mRNA Analysis Pipeline Introduction. The GDC mRNA quantification analysis pipeline measures gene level expression with STAR as raw read counts. Subsequently the counts are augmented with several transformations including Fragments per Kilobase of transcript per Million mapped reads

(FPKM), upper quartile normalized FPKM (FPKM-UQ), and Transcripts per Million (TPM).
